DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 7, and 11, drawn to a video signal recording/playback apparatus comprising: a recorder, a player, a controller an on-screen display, classified in class 386, subclass 46.
 - II. Claims 5,6, 8-10, drawn to a video signal playback apparatus comprising: a network interface, a player, a controller, and an on-screen display, classified in class 725, subclass 131.
2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination group II directs a network receiver for receiving and playback video signal, wherein the network receiver has a network interface (I/F) and does not require the particular display to display the time difference in a unit of seconds if said difference is less than one minutes, display the time difference in unit of minutes if said difference is less than 70 minutes and display the time difference in unit of hours if said difference is not less than 60 minutes of group I for patentability. The subcombination has separate utility such an on-screen display to display the time difference in a unit of seconds if said difference is less than one minutes,

display the time difference in unit of minutes if said difference is less than 70 minutes and display the time difference in unit of hours if said difference is not less than 60 minutes.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
